

Where Broadband Over Power Line has been tried or investigated, excessive interference has been found in frequencies used by licensed services in the 2 to 80-MHz range. BPL would thus not appear to be in the public interest. As WA8ROZ, I agree with the stand of the American Radio Relay League on ET 03-104 and urge disapproval by the FCC. I suspect millions of Americans in the northeastern U.S. who are presently without lights or air conditioning would prefer cooperation with the power utilities to be along more useful lines.
